SMS GUN [Bulk SMS Sender...]

SMS GUN is powerful software which is used to send bulk SMS. In today's competitive world to sustain the business and to maintain the number of customer is very difficult so there arises a need to advertise about your product and to advertise SMS sending is one of the best media because almost each and every people are having mobile. But to type message manually and to send it is bit difficult. But we at Multiicon recognized your problem and developed such software which can be used to send multiple messages at a time.

For this what you need is a mobile or a GSM router with the help of which message typed on computer screen will be send to the user whose number is inserted in the screen.

SMS Gun has many facilities the lists of this facility are as follows

- Contact Master
- SMS Master
- SMS Sender
- Reports
- Backup
- Settings

Contact Master

Contact Master is used to enter the contact details of the people to whom you want to send SMS. In contact master there are three fields they are Name, Mobile number and Group name. There are different types of controls given in Contact Master they are as follows.

- New
- Modify
- Delete
- Exit
- Search

New

If you want to make new entry then you can do it by pressing New button so the focus goes on the Name box where you have to enter the name of the person, in the second box you have to enter the mobile number and in last field either you have to enter the group name or you have to select it. Then press the save button so the record is now saved.

Modify

If you want to modify any record then you have to select that particular record and then press the modify button and make the changes which you want to do and then press the update button so that your record is now updated.

Delete

If you want to delete the record then same as you have to select that particular record and then press the delete button. So it will ask for the confirmation press the yes if you want to delete the record.

Search

Search option is used to do searching if you want to search a record then you can do it with the help of search option. You can do searching on two criteria they are by group name wise or by mobile wise. When you want to searching on group wise then select the **group wise** in **Look in** field and in **For what** write the name of the group on which you want to do the searching so all the records will be shown in the table given on the left of the screen.

When you want to do searching on mobile wise then select the **mobile wise** in **Look in** and give the mobile number in **For what** box and press the enter so all the records will be shown in the table give on the left of the screen.

Exit

Exit option is used to cancel any operation which is going on or it can be used to get off from Contact Master.

Below shows the screen of the Contact Master.

The screenshot shows the 'Contact Master' application window. It is divided into several sections:

- Contact List:** A table with columns 'No', 'Name', 'Mobile No.', and 'Group'. It contains two records: (1, MULTIICON, 9825551889, GENERAL) and (2, XYZ, 1234567890, GENERAL). A 'Total Record' bar at the bottom shows '2'.
- Search:** A section with two dropdown menus: 'Look In' (set to 'Group Wise') and 'For what' (set to 'GENERAL').
- Details:** A section with input fields for 'No', 'Name', and 'Mobile No.', and a dropdown menu for 'Group' (set to 'GENERAL').
- Controls:** A section with four buttons: 'New', 'Modify', 'Delete', and 'Exit'.

As shown above Contact Master is used to enter the contact details of different people.

SMS Master

SMS Master is used to store different type of the message with whom you have day to day concern like message of any advertisement of your product etc.

Same as Contact Master, SMS Master has same controls they are as follow

- New
- Modify
- Delete
- Search
- Exit

New

When you want to write new message then press the new button so the focus goes on the **SMS Text** write the message and select the name of the group for which you have written the message if given and if not given then write in the group name in the box and then press the save button so your message will be saved.

Modify

To modify the message you have to select that message which you can select from the table given on the top if not given then search it and double click the record in the table and press the modify button, make the changes which you want to do and press the update button so the record is now updated.

Delete

To delete a record you have to select that record same as modify option and then press the delete option so it will ask for the confirmation so the record will be deleted.

Search

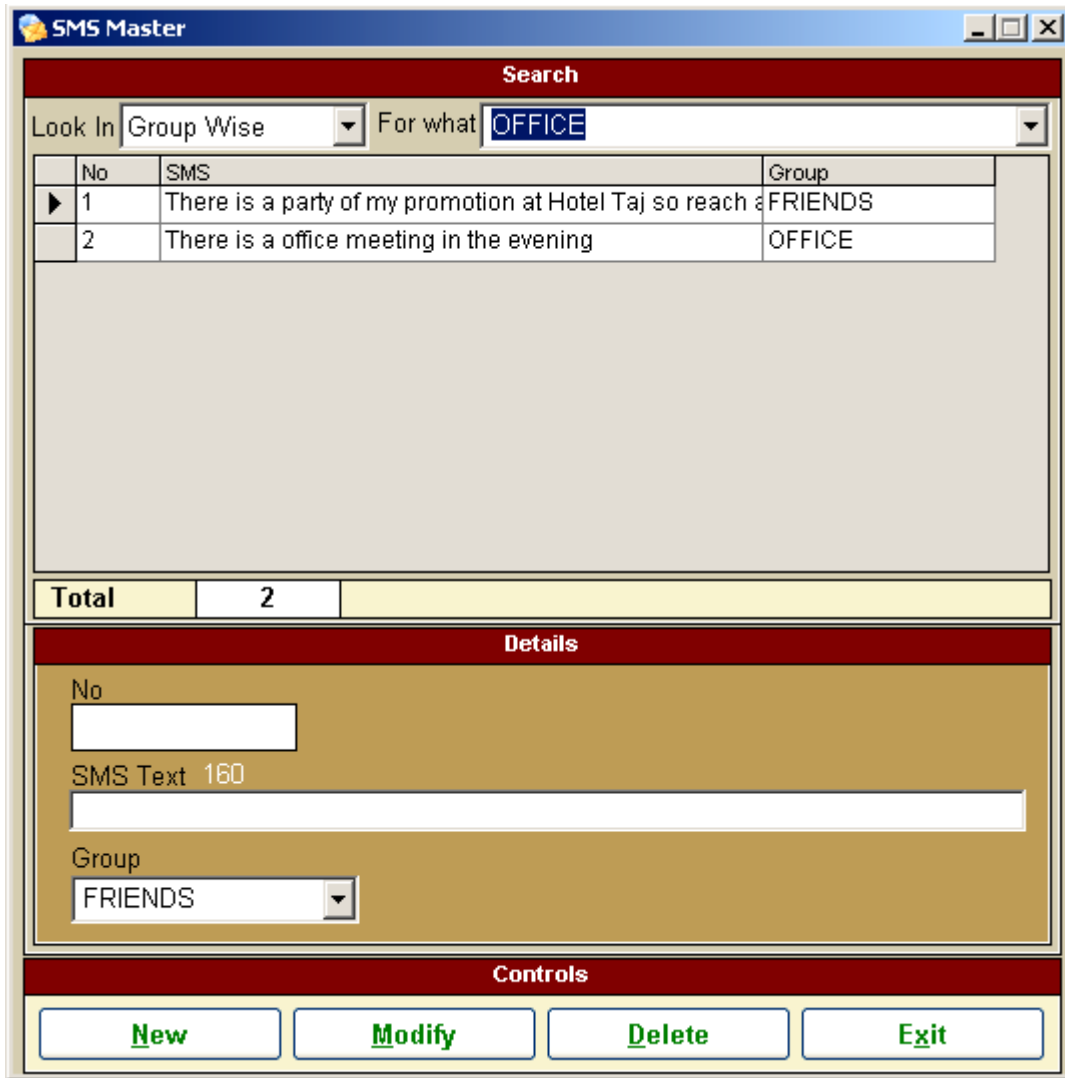

Search option is used to search the particular record in search option so can do searching on two criteria they are **All** and **Group wise**

In All it shows all the records while in Group wise can do searching on different group for this select the group from **For what** and press enter so all the records of that particular group will be shown on the table.

Exit

Exit option is used to cancel any operation or it is used to get off from SMS Master.

Below shows the screen of the SMS Master.

So as shown above SMS Master is used to write the message.

SMS Sender

SMS Sender is one of the most important forms of the SMS GUN. With the help of SMS Sender you can send the message to different people.

For SMS Sending there are three important steps which are as follow.

1. Select the Message
2. Select the Contact
3. Press Send Button.

Select the Message

To send message the first step is to select the message which you want to send to different people for this you can do in two option either select it from Template or write it Manually

For manual writing first of all select the Manual option from Look in so a box will be seen on the screen type your message there and press enter. So your message is ready to send

For Template first of all select the Template option from Look in so a window will open on the screen. In which message already written using SMS Master will be shown select the message which you want to send by pressing the Down arrow key and press the Back button so that message is selected for sending.

Remember that you can select more than one message also. All the message you have select will be delivered to all the user which you have selected.

The Template screen is shown below for more information.

:: Message Selection ::

Look In Find What

SMS	Group
<input type="checkbox"/> There is a party of my promotion at Hotel Taj so reach	FRIENDS
<input type="checkbox"/> There is a office meeting in the evening	OFFICE

SMS	Group
<input checked="" type="checkbox"/> There is a party of my promotion at Hotel Taj so reach	FRIENDS
<input type="checkbox"/> There is a office meeting in the evening	OFFICE

So as shown above you can select all the message which you want to send at a time and press Back button. You can do searching also for this select the criteria from **Look in** and give the value in **For what**. you can do searching on two criteria they are Group wise and No wise.

Select the Contact

Second step for sending SMS is to select the contact number of all the people to whom you want to send message. For selecting contact number there are two options they are 1) Local and 2) Right Hand

Local

In Local you can select all the record which you have entered in Contact Master. For this select the option **Local** in the **Look in** so a pop up window will appear on the screen in which there are contact details of all the people which you have entered through Contact Master.

You can select multiple record also for this press the down arrow key so all the record will come from upper table to lower table and press **Back** button so your contact details is ready to send.

You can enter the contact details at the time of selection also for this add the mobile number in the box given at bottom of the screen and press the Add button so that number will be added to the table and press the **Back** button

You can do searching on multiple criteria like Group wise and Mobile number wise. For this select the criteria in **Look in** on which you want to do searching and then

enter the searching value in the **For what** boxes and press the **Go** button. So all the records fulfilling the criteria will be displayed in the upper table now select the record which you want to add to Contact details by pressing down arrow button.

Below shows the screen of contact details for your help and easy understanding.

Add

Back

So as shown above you can select the contact details.

Right Hand

This option is used to get the contact details from Right Hand software. Right Hand is our software which is used for office work for maintaining the contact details and address of the client etc for more information see the help of Right Hand.

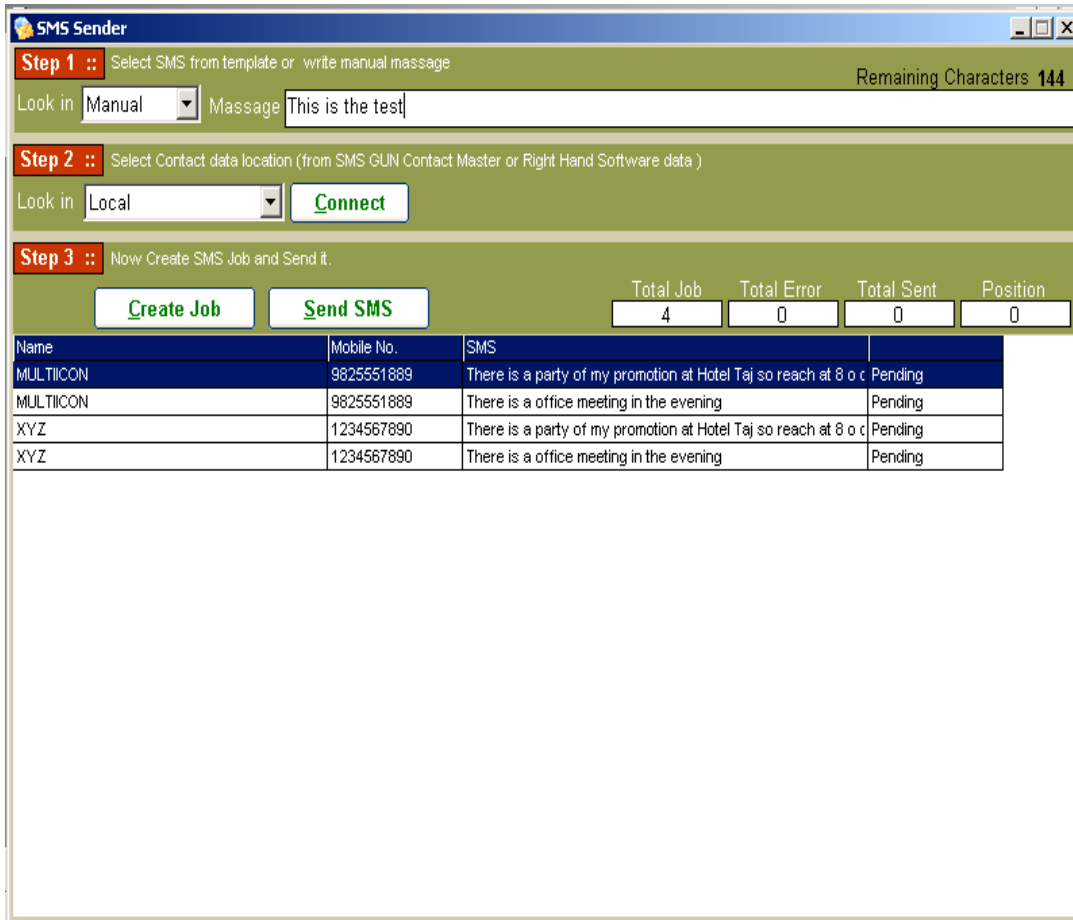

So with the help of Right Hand option you can get the contact details of the Right Hand for this select the **Right Hand** from **Look in** so a normal window will open select the Right Hand database name **data** [which is a Microsoft access file] from the Right Hand folder so it will take all the contact details of Right Hand on its own.

Send

After getting the message from select message option and getting the contact details from contact details step comes the third step in which you have to press the **Create Job** button so in below given table all the contact person number with the message will be shown and now press the **Send** button so the message will be send to the person

You can also the information about Total number of job, how many have of them are send how many of them has error in sending and current position etc on the box given in middle of the screen on right side.

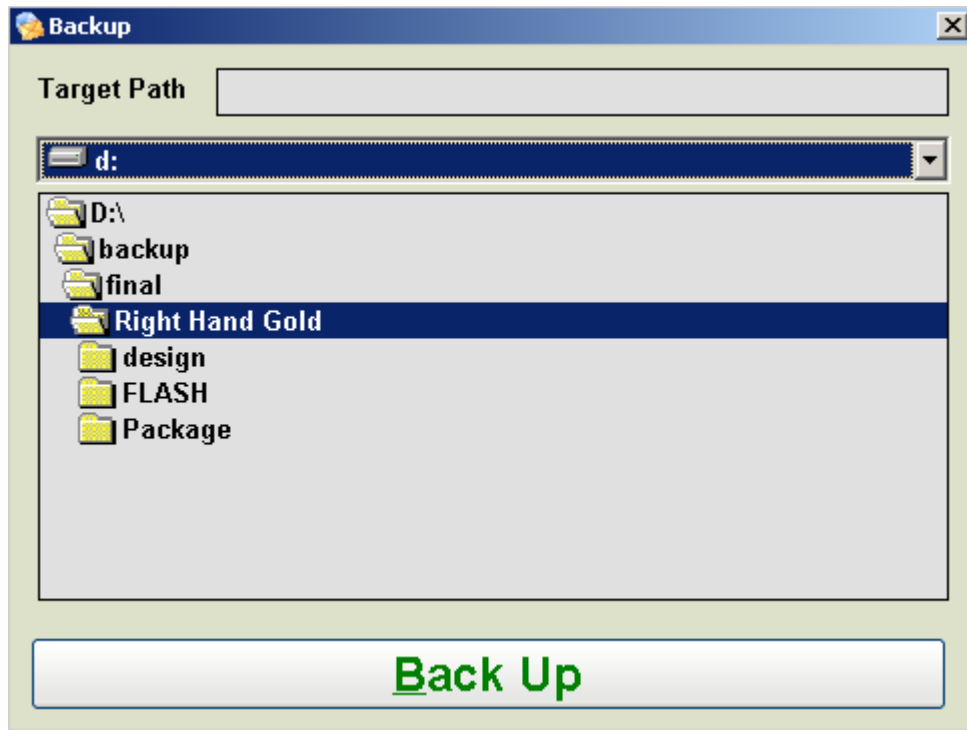

Below shows the SMS Sending screen.

So as shown above SMS Sending is very easy.

Backup

It is one of the most important option of the Banker software suppose you want to take the copy of your records saved then you can do it with help of Backup option for this you have to select the path and just press the backup button so Banker will take the backup on its own. So your records will be safeguarded. If the records from original database are missing then you can copy them from the backed up file. Below shows the figure of backup window.

So as shown above you can take the backup of your data.

Settings

Settings option is used to do different type of settings there are two type of setting they are Security and Other Setting

Security

In security setting you can do setting related to security like password user name and its rights. There are three option in security they are Add new, Modify and Cancel If you want to add new user then you can do it with the help of Add new button for this press Add New button and enter the User Name, password and retype the password along with checking the rights which you want to assign him by checking all the box in front of different rights and then press the Save button so the new user is created.

If you want to make changes in the user account like the user name or password or different rights then you can do it with the help of Modify button for this press the Modify button so the focus goes on the user name box select the user and press enter so all the rights pertaining to him will be shown to you make the modification which you want to do and press the Save button so the modification will be saved in the user's account.

Cancel button is used to cancel any operation or it is used to get out of Settings window.

Other Settings

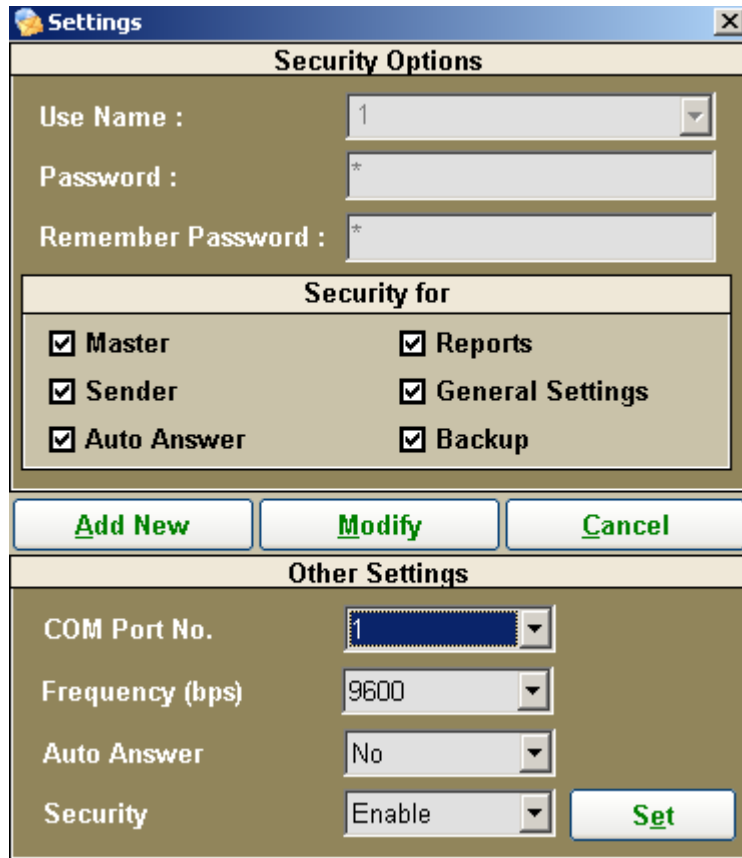

In other settings you can do the setting related to SMS sending. There are four different types of other settings they are Comm. Port selection for this There are 10 number given in the box select the appropriate number. The number of Comm. Port is selected on bases of on which port your are connecting your Mobile or GSM router.

The second settings is of frequency means at which frequency you want to send the message this frequency are selected on the bases of the frequency supported by the your Mobile phone or GSM router.

The Third option is of Auto Answer is option is selected if you want to get the reply message from the mobile service provider that message is send or not.

The fourth option is of Security enable or disable if choose enable then when the software is starting then it asks for the user name and password and if disable is selected then it do not asks for the password and user name.

Below shows the screen of the settings

Thus setting window is used to do different types of settings.

Thus as described above SMS Gun is a very powerful which is used to send multiple SMS with the help of computer so there is no need to type message on a small mobile screen just type on the computer's big screen and send it all easy...
